Abstract

The text of the abstract should be copied into a respective field in the APD system.
The Abstract with keywords should not exceed one page.

Keywords: 2-5 keywords, separated by commas

Chapter 1

Introduction

- introduction into the problem domain
- settling of the problem in the domain
- objective of the thesis
- scope of the thesis
- short description of chapters
- clear description of contribution of the thesis's author – in case of more authors
table with enumeration of contribution of authors

Chapter 2

[Problem analysis]

- problem analysis
- state of the art, problem statement
- literature research (all sources in the thesis have to be referenced [2, 1, 3, 4])
- description of existing solutions (also scientific ones, if the problem is scientifically researched), algorithms, location of the thesis in the scientific domain

Chapter 3

Requirements and tools

- functional and nonfunctional requirements
- use cases (UML diagrams)
- description of tools
- methodology of design and implementation

Chapter 4

External specification

- hardware and software requirements
- installation procedure
- activation procedure
- types of users
- user manual
- system administration
- security issues
- example of usage
- working scenarios (with screenshots or output files)

**Silesian
University
of Technology**

Figure 4.1: Figure caption (below the figure).

Chapter 5

Internal specification

- concept of the system
- system architecture
- description of data structures (and data bases)
- components, modules, libraries, resume of important classes (if used)
- resume of important algorithms (if used)
- details of implementation of selected parts
- applied design patterns
- UML diagrams

Use special environment for inline code, eg **descriptor** or **descriptor_gaussian**. Longer parts of code put in the figure environment, eg. code in Fig. 5.1. Very long listings—move to an appendix.

```

1 class descriptor_gaussian : virtual public descriptor
2 {
3     protected:
4         /** core of the gaussian fuzzy set */
5         double _mean;
6         /** fuzzyfication of the gaussian fuzzy set */
7         double _stddev;
8
9     public:
10        /** @param mean core of the set
11            @param stddev standard deviation */
12        descriptor_gaussian (double mean, double stddev);
13        descriptor_gaussian (const descriptor_gaussian & w);
14        virtual ~descriptor_gaussian();
15        virtual descriptor * clone () const;
16
17        /** The method elaborates membership to the gaussian
18            fuzzy set. */
19        virtual double getMembership (double x) const;
20 };

```

Figure 5.1: The **descriptor_gaussian** class.

Chapter 6

Verification and validation

- testing paradigm (eg V model)
- test cases, testing scope (full / partial)
- detected and fixed bugs
- results of experiments (optional)

Chapter 7

Conclusions

- achieved results with regard to objectives of the thesis and requirements
- path of further development (eg functional extension ...)
- encountered difficulties and problems

Table 7.1: A caption of a table is **above** it.

| method | | | | | | | |

Appendices

Index of abbreviations and symbols

DNA deoxyribonucleic acid

MVC model–view–controller

N cardinality of data set

μ membership function of a fuzzy set

\mathbb{E} set of edges of a graph

\mathcal{L} Laplace transformation

List of additional files in electronic submission (if applicable)

Additional files uploaded to the system include:

- source code of the application,
- test data,
- a video file showing how software or hardware developed for thesis is used,
- etc.
